AB - J53058024 Nylon-6 multifilament, which is composed of single filaments differing in fineness and/or cross-sectional shape, is prepd. by (a) direct spin-drawing 1st godet roller speed ≥ 3000 m/min take-up speed ≥ 3500 m/min (b) arranging the resulting nylon-6 multifilaments in parallel and false-twisting.

- Textured nylon-6 yarn is produced from mixed denier (or mixed profile) nylon-6 multifilament. By proper adjustment of the godet roller speed and the take-up speed, sufficient crimp-stability and uniform affinity to dyes are imparted to the textured yarn.
